

YOUTH FOR CLIMATE ACTION IN GHANA

USAID through the Policy LINK activity is educating an estimated 1,300 senior high school students in Ghana about climate change.

Where:

The pilot is targeting eight schools in northern Ghana.

Topics covered include:

- Food security
- Green jobs
- Existing opportunities along the agricultural value chain
- Impact of climate change in communities and in the agriculture sector

Outcomes:

- Students have committed to **reducing the impact of climate change** in their schools and communities.
- Students are creating awareness among their peers and in the community by **initiating the green garden project** which encourages tree planting.
- School heads have embraced this initiative and also **pledged to support** the students.
